EXPERIMENT-4b

ROLL NO:240701167 NAME: HARINI NAGARAJAN

Conduct task analysis for an app (e.g., online shopping) and

document user flows. Create corresponding wireframes using dia .

AIM:

The aim is to perform task analysis for an app, such as online shopping, document user flows, and create corresponding wireframes using Dia.

Tool link: http://dia-installer.de/

INTRODUCTION:

Task analysis is the process of identifying the sequence of actions a user performs to complete a task in an application. User flow diagrams visually represent these steps, helping improve usability and user experience.

In this experiment, a movie ticket booking system is analyzed. The Dia tool is used to create flowcharts and wireframes representing the user journey from selecting a movie to booking tickets.

TASK IDENTIFICATION:

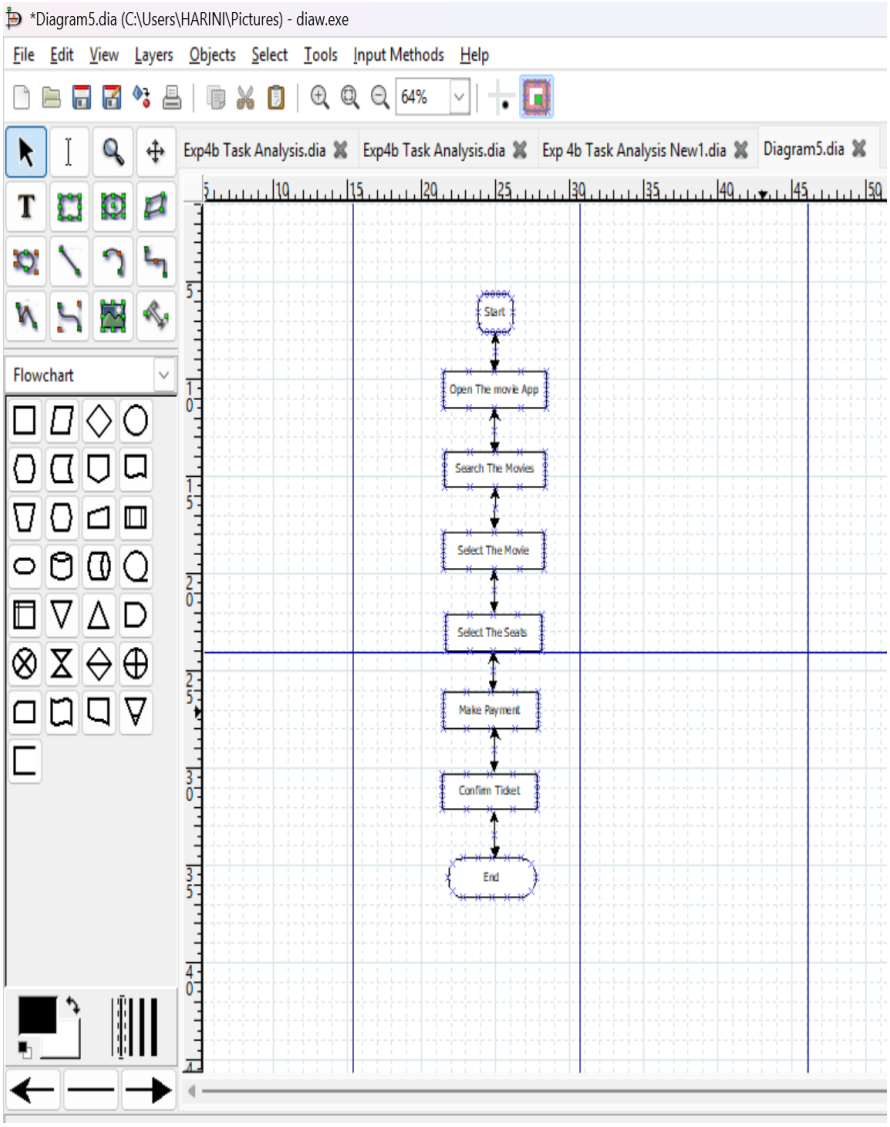
The major tasks identified in the movie booking application are:

- Opening the application
- Searching or browsing movies
- Selecting a movie
- Selecting seats
- Making payment
- Confirming ticket

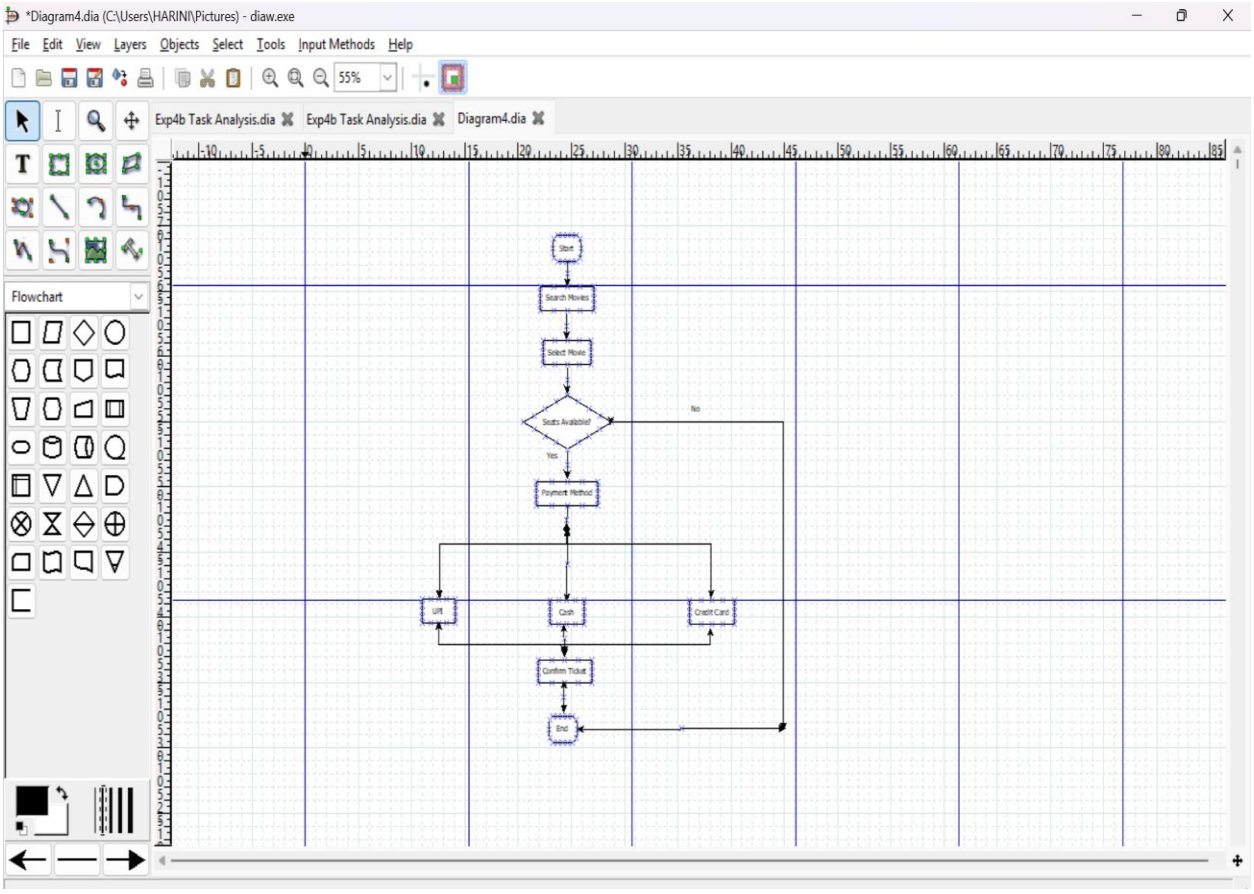
COMBINED USER FLOW:

Master Flow:

Start → Open Movie App → Search Movies → Select Movie → Select Seats → Make Payment → Confirm Ticket → End



DETAILED TASK ANALYSIS:



1⃣Opening the Application

- User launches the movie booking app
- Home screen is displayed

Flow:

Start → Open App → Home Screen

2⃣Searching Movies

- User browses available movies or uses search
- Movie list is displayed

Flow:
Home Screen → Search/Browse Movies → Movie List

3. Selecting a Movie

- User selects a movie from the list
- Movie details and show timings are displayed

Flow:
Movie List → Select Movie → Movie Details

4. Selecting Seats

- User selects preferred showtime
- Chooses available seats

Flow:
Movie Details → Select Showtime → Select Seats

5. Making Payment

- User proceeds to payment
- Selects payment method
- Completes payment

Flow:
Select Seats → Payment Page → Enter Payment Details

6. Confirming Ticket

- System confirms booking
- Ticket is generated

Flow:
Payment → Ticket Confirmation → End

DECISION POINTS

- Are seats available?
- Is payment successful?
- Does user want to retry payment if failed?

WIREFRAME REPRESENTATION (IN DIA)

Home Screen

- App logo
- Search bar
- List of movies

Movie List Screen

- Available movies
- Posters and titles
- Filters (optional)

Movie Details Screen

- Movie name
- Show timings
- Book Ticket button

Seat Selection Screen

- Seat layout
- Available/Booked seats
- Confirm button

Payment Screen

- Payment options (UPI/Card/Net Banking)
- Total amount
- Pay button

Confirmation Screen

- Booking success message
- Ticket details
- Download/View ticket

PROCEDURE (USING DIA TOOL)

1. Open Dia tool
2. Create a new diagram
3. Select **Flowchart shapes** from toolbox
4. Use shapes:
    - Oval → Start/End
    - Rectangle → Process
    - Diamond → Decision
5. Add text for each step:
    - Start
    - Open Movie App
    - Search Movies
    - Select Movie
    - Select Seats
    - Make Payment
    - Confirm Ticket

    - End
6. Connect shapes using arrows
7. Arrange flow vertically (as in your diagram)
8. Save and export the diagram

RESULT

The task analysis and user flow diagram for the movie ticket booking application were successfully created using the Dia tool, clearly representing all user interactions from app opening to ticket confirmation.

CONCLUSION

- Task analysis helps understand user behavior in booking systems
- User flow diagrams improve navigation and usability
- Dia tool simplifies flowchart creation
- This process helps in designing efficient and user-friendly applications
