EXPERIMENT-3b

ROLL NO:240701167 **NAME: HARINI NAGARAJAN**

Create a prototype with familiar and unfamiliar navigation elements. Evaluate ease of use with different user groups using wireflow.

AIM:

The aim is to design a prototype with both well-known and new navigation elements and measure user-friendliness across different user groups using Wireflow.

Tool link: https://wireflow.co/

STEP 1: PLAN YOUR PROTOTYPE

Define Navigation Elements

✓ Familiar Navigation:

- NEXT button
- Back button
- Linear progression of steps
- Visible CTAs (Select, Proceed, Pay)

✓ Unfamiliar Navigation:

- Tap movie poster to navigate
- Swipe left/right between movies
- Swipe up for seat details
- Long-press movie card for extra info

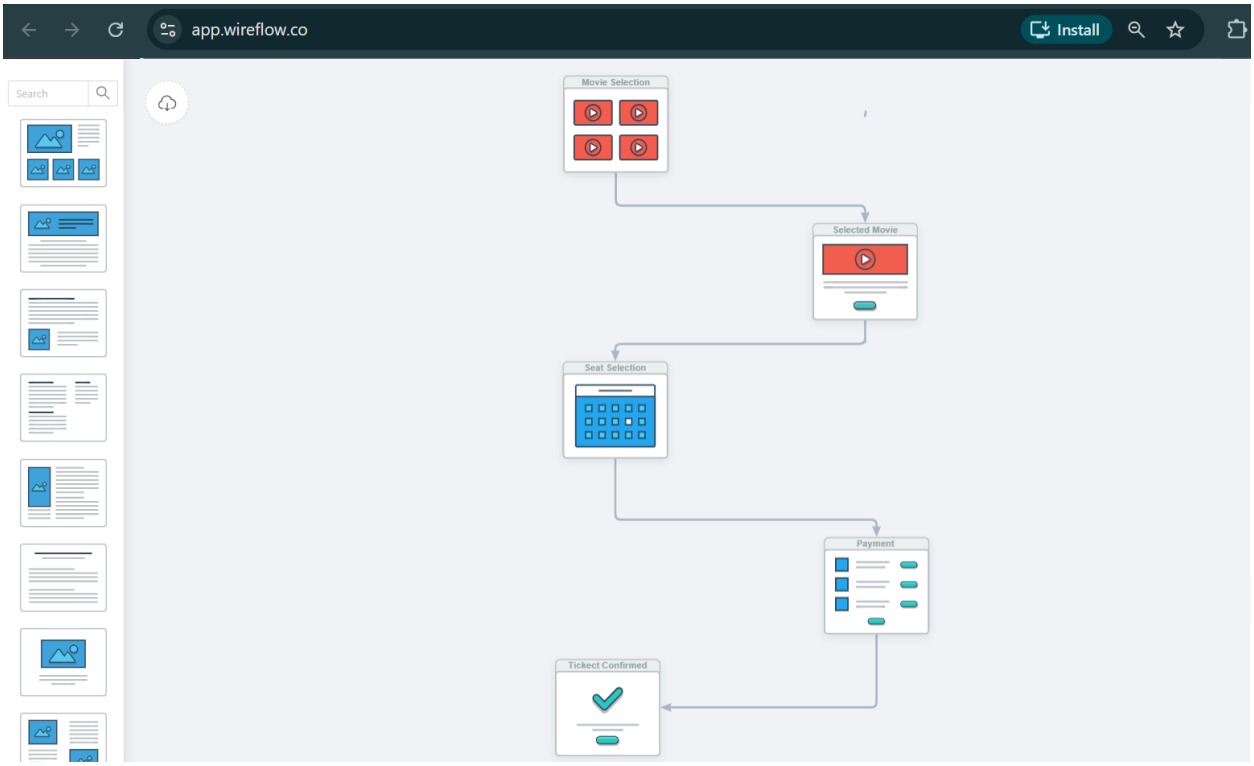
STEP 2: SET UP WIREFLOW PROJECT

1. Visit **wireflow.co
2. Select **New Project**
3. Name it: **"Movie Booking Navigation Wireflow"**
4. Choose **Blank Project**

STEP 3: DESIGN YOUR WIREFLOW SCREENS

Create the following screens based on your uploaded wireframe:

Create 5 Screens (Cards)



1. Movie Selection Screen

- Label: *Screen 1 — Movie Selection*
- Grid of movie posters
- Interaction options:
    - Tap movie → next screen
    - Swipe left/right → browse movies

2. Selected Movie Details

- Label: *Screen 2 — Selected Movie*
- Shows:
    - Poster
    - Summary
    - “Continue” button

3. Seat Selection

- Label: *Screen 3 — Seat Selection*
- Seating layout grid
- Unfamiliar interaction:
    - Swipe up → seat info
    - Tap seat to select

4. Payment Screen

- Label: *Screen 4 — Payment*
- Ticket summary
- Payment options
- “Confirm Payment” button

5. Ticket Confirmation Screen

- Label: *Screen 5 — Ticket Confirmed*
- Success checkmark
- Booking summary

STEP 4: ADD NAVIGATION FLOWS

✓ Familiar Navigation Flow

Using arrows in Wireflow:

- Movie Selection → Selected Movie (Tap movie / Continue button)
- Selected Movie → Seat Selection
- Seat Selection → Payment
- Payment → Ticket Confirmed

Add **Back arrows**:

- Selected Movie → Movie Selection
- Seat Selection → Selected Movie
- Payment → Seat Selection

✓ Unfamiliar Navigation Flow

1. Swipe Navigation

- "Swipe Left → Browse Movies"
- "Swipe Right → See Previous Movie"

2. Long-Press Interaction

- "Long Press Movie Poster → View Detailed Info"

3. Image-Tap Navigation

- Tap Movie Poster → Directly open details screen

4. Gesture-Based Seat Navigation

- “Swipe Up → Seat Info”
- “Tap Seat → Select Seat”

Add each as small annotations on your arrows in Wireflow.

STEP 5: LABEL YOUR FLOWS

Use clear annotations such as:

- “Familiar Navigation”
- “Unfamiliar Navigation (Gesture-based)”
- “Tap Interaction”
- “Long-Press Interaction”
- “Swipe Navigation”

This improves clarity and ensures full marks.

FINAL CONCLUSION

- Familiar elements (buttons, linear navigation) make the booking process predictable and user-friendly.
- Unfamiliar elements (swiping, long-press, image tap) add interactivity and reduce clutter, but may confuse first-time users.
- A well-balanced interface combines both, improving usability while keeping the experience modern and intuitive.
