EXPERIMENT - 4a

ROLL N0:240701167 **NAME: HARINI NAGARAJAN**

Conduct task analysis for an app (e.g., online shopping) and

document user flows. Create corresponding wireframes using Lucidchart.

AIM:

To understand and document the steps a user takes to complete the main tasks within an online shopping app.

Tool Link: https://www.lucidchart.com/pages/

INTRODUCTION

Task analysis is the process of identifying and understanding the steps a user takes to complete a specific goal in an application. User flow diagrams visually represent these steps, helping designers improve usability and navigation.

In a movie ticket booking system, task analysis helps understand how users search movies, select show timings, book seats, and complete payments efficiently.

TASK IDENTIFICATION

The following key tasks in a movie booking app are identified:

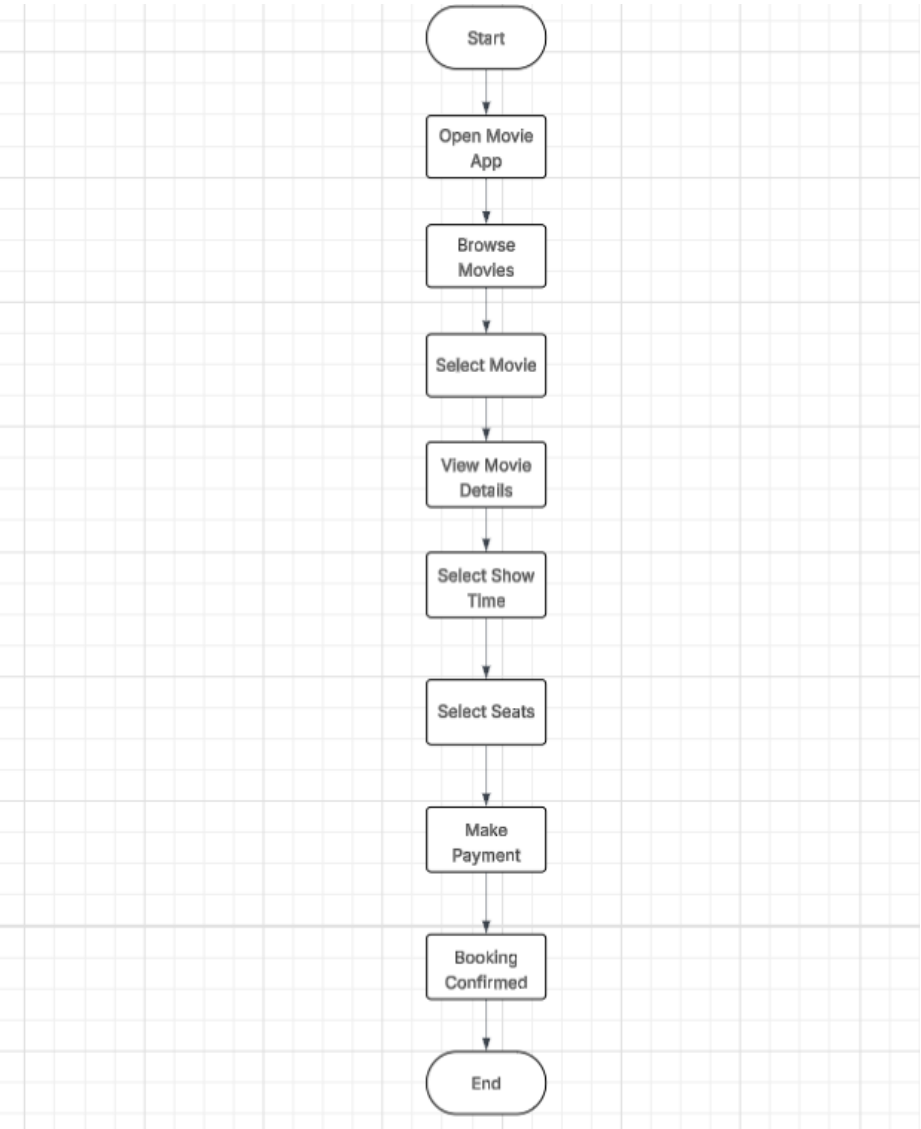
- Browsing movies
- Searching for movies

- Selecting show time and seats
- Making payment and confirming booking

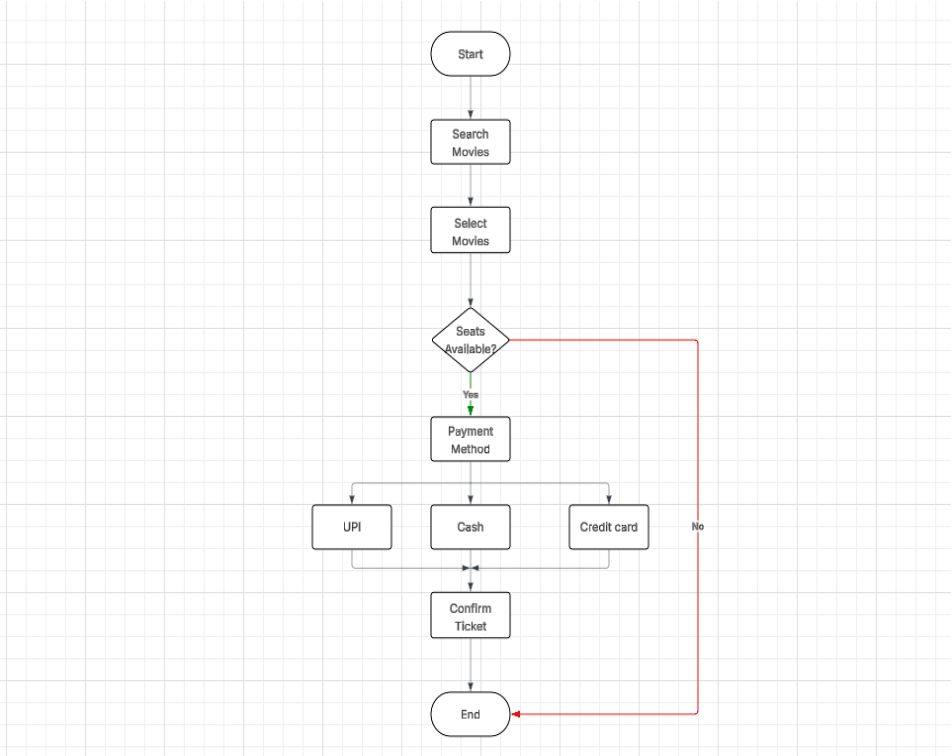
USER FLOW DIAGRAM (COMBINED FLOW)

Master Flow:

Start → Open App → Browse/Search Movies → Select Movie →
View Details → Select Show Time → Select Seats →Payment → Confirm Ticket
→ End



DETAILED TASK ANALYSIS



☐Browsing Movies

- User opens the app
- Views list of movies
- Scrolls through available movies
- Selects a movie

Flow:

Home → Movie List → Select Movie

2⃣ Searching for a Movie

- User taps search option
- Enters movie name
- Views results
- Selects desired movie

Flow:

Search → Enter Movie Name → Results → Select Movie

3⃣ Selecting Show Time and Seats

- User views movie details
- Selects preferred show time
- Chooses available seats

Flow:

Movie Details → Select Show Time → Select Seats

4⃣ Payment and Booking Confirmation

- System checks seat availability
- User selects payment method (UPI / Cash / Credit Card)
- Confirms booking
- Receives ticket confirmation

Flow:

Seats Available → Payment Method → Confirm Ticket → End

DECISION POINTS

- Are seats available?
- Which payment method is selected?
- Is payment successful?

WIREFRAME DESIGN

Home Screen

- Movie listings
- Search bar
- Categories (Now Showing, Upcoming)

Movie Details Screen

- Movie poster
- Description
- Ratings
- Show timings

Seat Selection Screen

- Seat layout
- Available/Booked seats
- Selection option

Payment Screen

- Payment options (UPI, Cash, Credit Card)
- Total price
- Confirm button

Booking Confirmation Screen

- Booking success message
- Ticket details
- Show time and seat number

PROCEDURE (USING LUCIDCHART)

1. Open Lucidchart and create a new document
2. Select a blank template
3. Add shapes:
    - Oval → Start/End
    - Rectangle → Process
    - Diamond → Decision
4. Label each step clearly
5. Connect shapes using arrows
6. Organize flow logically
7. Add colors for clarity
8. Save and export the diagram

RESULT

The task analysis and user flow diagrams for the movie ticket booking application were successfully created. The flow clearly represents user interaction from movie selection to ticket confirmation.

CONCLUSION

- Task analysis helps understand user behavior
- User flow diagrams improve navigation and usability
- Wireframes provide a clear structure of the application
- Lucidchart is effective for designing system flows
