Develop low-fidelity paper prototypes for a banking app and convert them into digital wireframes using Pencil Project

AIM:

The aim is to develop low-fidelity paper prototypes for a banking app and convert them

into digital wireframes with Pencil Project.

PROCEDURE:

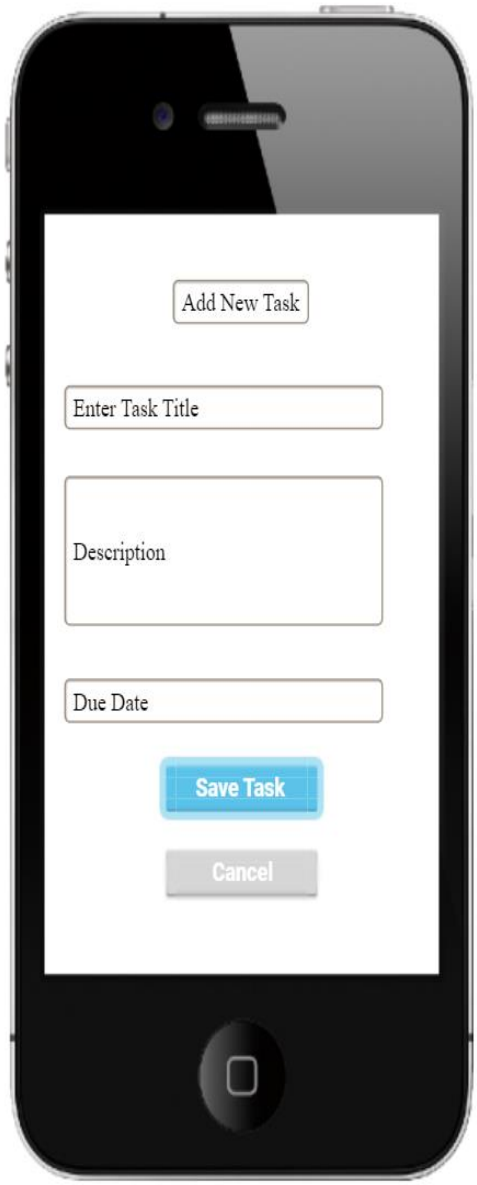
Tool Link: https://pencil.evolus.vn/

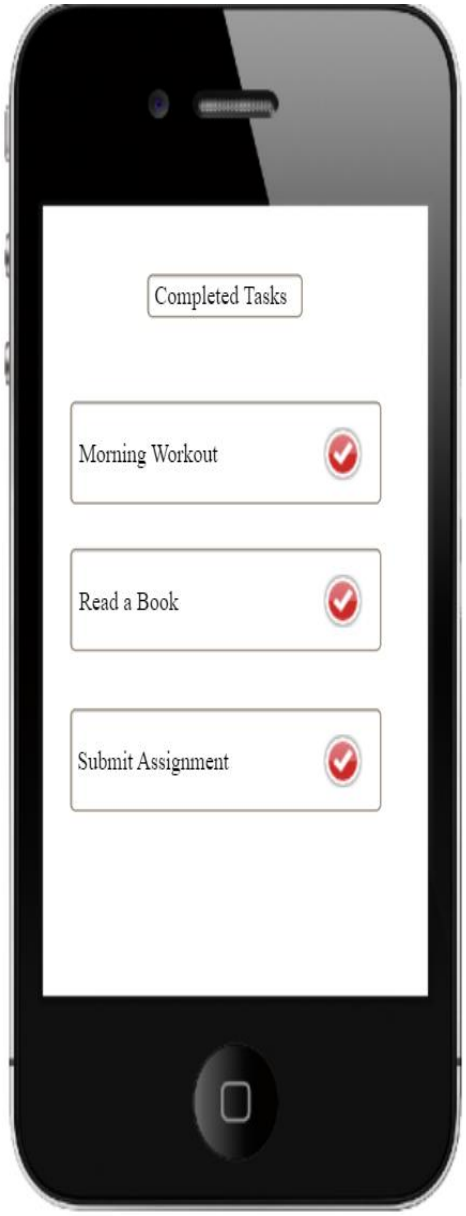
1. Pencil Project was launched and a new project was created for a mobile To-Do List application.
2. Paper prototype screens (low-fidelity) were first sketched to represent the initial design concept with hand-drawn styling.
3. Digital wireframe screens (high-fidelity) were then designed using Pencil Project's built-in mobile UI components to replicate a clean, modern interface.
4. Each of the 4 pages was designed to simulate the core screens of the application: Login, Task List, Add Task, and Completed Tasks.
5. Navigation flow was mapped to show the transition logic between screens.
6. A bottom navigation bar (Tasks, Add, Done, Settings) was included on relevant screens for consistent UX.

USER FLOW:

7. Login Page – User enters credentials (username & password) and clicks LOGIN to access the app.
8. Task List Page – User is greeted and sees pending tasks with due dates. Can add new tasks via the '+' button.
9. Add Task Page – User fills in task title, description, and due date, then saves or cancels.
10. Completed Tasks Page – User views all tasks marked as done, with their completion dates.

WIREFRAME:





1. Login Page

Components:

- App logo: clipboard icon with checkmarks
- Bold title: 'To-Do List'

- Username field with person icon (placeholder text)
- Password field with lock icon (placeholder text)

Purpose:

A polished digital version of the login screen with iconography and proper UI component styling using Pencil's mobile kit.

2. Task List Page

Components:

- Greeting text: 'Hello, User! You have 3 tasks'
- Dark circular '+' FAB (Floating Action Button)
- Task list cards with square checkboxes
- Active bottom nav: Tasks tab highlighted with bold label

Purpose:

Refined task list view with consistent spacing, typographic hierarchy, and interactive elements aligned to mobile UX standards.

3. Add New Task Page

Components:

- Bold centered title: 'Add New Task'
- Labeled input: 'Task Title' with placeholder 'Enter task title'
- Labeled textarea: 'Description' with placeholder 'Enter description'
- Date field labeled 'Due Date' with calendar icon and DD/MM/YYYY placeholder
- Filled dark 'SAVE TASK' button
- Outline 'CANCEL' button

Purpose:

Clean digital wireframe for task creation form with proper label-field pairing and clear CTA hierarchy.

4. Completed Tasks Page

Components:

- Completed task entries with filled circular checkmark icons
- Each entry shows task name
- Tasks: Morning workout, Read a book, Submit assignment

Purpose:

Displays completed tasks with visual confirmation checkmarks. The 'Done' tab in the navigation is active, providing clear context to the user.

RESULT:

Successfully created sketches and digital wireframes for a 4-page To-Do List mobile application using Pencil Project. The design clearly illustrates the navigation from login to task management and completed task review.
